

# What could supply chain integration do for your business?

Find out in this highly interactive one day workshop!

## Features

- ▶ Entirely hands-on workshop featuring a unique construction supply chain simulation "Estate of the Nation"
- ▶ Contrast the historic approach to organising construction with partnering and integrated supply chains
- ▶ Suitable for 14 to 28 participants
- ▶ Ideal for involving your customers and suppliers to build better relationships
- ▶ Excellent management or team development day
- ▶ Can be adapted to suit your company's particular requirements

## Who should attend?

If you are involved with the development of business strategy, supply chain development, logistics, procurement or production then this workshop is for you!

## Benefits

- ▶ Discover the incredible impact that rearranging the flow of information and materials can have on productivity
- ▶ Learn the key to reducing cost and increasing project reliability
- ▶ Understand the principles which underpin the Egan Report
- ▶ See how 'lean thinking' can be applied to construction:
  - ▶ Value
  - ▶ Value Streams
  - ▶ Flow
  - ▶ Pull
  - ▶ Continual Improvement

Whether we choose to recognise it or not, the reality is that individual companies do not compete, the entire supply chain does.

Typically, construction supply chains are so fragmented and discontinuous, that the number of variables involved make 'on time and to budget' impossible for most projects.

Learn how the principles of supply chain integration can be applied to make 'on time and to budget' a reality for your company

Our fee for this one-day workshop is £2000 + VAT (up to 20 participants)
